

773 gather some vegetable dye in a tree in which he had put a snake. The wily nephew made designs on his leg with the dye which caused the snake to fall out of the tree. He returned home and resumed his relations with his uncle's wife.

Jemenary then ordered Kelenewary to cross a river in which there was a fish that would surely eat him. The nephew suffered some bites, but these he cured by smearing with another vegetable dye. The infuriated uncle then sent him to the village of Rain, Kelenewary's cross-cousin, to get a highly prized wood which Rain guarded closely. Kelenewary arrived at Rain's village and repeatedly urged Rain to have sexual intercourse with his wife. After many wakeful nights, the couple, exhausted, fell into deep sleep. Kelenewary stole the wood, and returned to his uncle's house, where he continued to sleep with his uncle's wife.

Later, when the two men were building an eagle cage, Kelenewary, who was sitting on top of it, angered his uncle by saying that the eagle was no larger than one of his wife's pubic hairs. The enraged Jemenary released the vertical poles in the framework of the structure, catapulting the insolent nephew through the air and into the branches of a tree. Kelenewary was hurt, and Nane, a creature having a human form but capable of flying, carried him to his village. Under Nane's care, he drank medicines that restored him to health and caused him to grow to a tremendous size. The uncle, in despair, created the deer with the intention of having it kill his nephew. Kelenewary, however, lassoed the animal with his armband, and it killed the uncle instead. The opposition thus removed, the nephew returned to the embraces of his dead uncle's wife.

Lore and Learning

821 The cosmology of the Trumai was not very elaborate. Many stars
[775] and constellations were known and named. As noted above, the Milky Way entered into their beliefs of an after-life. Special attention was also given to the Hesperides, which may be the constellation that dates their ceremonial season at the end of the rains. Quain was told by Thomas
[241] Young, the missionary, that the planting time was determined by astral
[805] phenomena. Quain was not able to confirm this, but he noted that the Trumai knew the proper time for burning the felled brush. This knowledge was important as the rains arrive suddenly, and once the brush becomes wet it is almost impossible to fire.

805 Flora and fauna also served as markers of seasonal passage. One such
824 sign was an insect that issued a shrill and pleasant whistle from dusk
825 until far into the night in the weeks immediately preceding the rainy season.

RELIGIOUS BELIEFS AND PRACTICES

77

It was Quain's good fortune that a lunar eclipse occurred while he was still in the company of the Trumai who were escorting him back to civilization. On about November 7, 1938, the moon eclipsed shortly after it rose. When it was first noticed, one man asked Quain to fire his gun. Another danced and shot a burning arrow at the moon. 921 789

The eclipse lasted for more than an hour, and during this time the Indians refused to proceed further. It was necessary to frighten away whatever was eating the moon. To right the disturbance of the natural harmony, Maibu drew himself up to his full stature and addressed the moon at great length. All the tribes in the area, Quain was told, were taking similar measures.

The eclipse was thought to be a harbinger of evil. One man decided to return home in the belief that now the white men would kill him. Yati, who had an infected hand, was sad because Matiwana, his father, would think by this sign that he, Yati, had been "killed" by Mehinaku witchcraft. As Yati's hand grew worse, the rest of the party began to believe that the eclipse was caused by old Matiwana's tears. [787]

Seasons were recognized as "sunny times" and "rainy times," and the number of moons and their phases were used as time-markers. Long periods were reckoned as "when my father was small" or "when I was a boy;" short periods by adding up the passing nights. This latter method was ineffectual for anything after ten days, as ten marked the upper limit of Trumai counting. 805 [802]

Enumeration of objects was shown by holding up the appropriate combination of fingers. There were words for the numbers one through ten, but ten also signified "a great many." Large quantities could be expressed by gesture as well. When Maibu wanted to indicate many *beijá*, he held up his hand to their height when stacked. 802
